

CLOUD APPLICATION BACKUP

Leading cloud applications only allow the recovery of accidentally deleted data for a very limited time. SharePoint and OneDrive keep deleted data for 90 days; Office 365, G-Suite and Google Mail keep it for 30 days; Salesforce.com for only 14 days; and Yahoo! Mail for only 7 days. After the retention period runs out, the data is deleted forever. Both Clear Technology Consulting Cloud Backup and Clear Technology Consulting Disaster Recovery eliminate this source of data loss with cloud application backup capabilities.

KEY FEATURES & BENEFITS

Office 365

Office 365 Backup

Backup and recover emails, calendars, contacts and tasks for all users. Restore to the original account or another account.

G Suite

G-Suite & Google Mail Backup

Backup and recover email, chat, documents/Drive, calendar, contacts and tasks for all users. Restore to the original account or another account as part of a migration. Convert Google mail, contacts and calendar to a Microsoft Office .PST file.

Salesforce Backup

Backup all data, including standard objects, customized objects, documents, attachments, Chatter feeds and Metadata such as workflows, Apex classes, etc. – in both production and sandbox environments. Exclude specific tables or backup only selected parts of a table. Compatible with Contact Manager, Group, Professional, Enterprise, Performance, Unlimited and Developer editions.

SharePoint OneDrive

Share Point and OneDrive Backup

Backup SharePoint Online Team Site (and all sub-sites), Public Site (and all sub-sites), Private Site Collections and individual OneDrive for Business data.

Storage & Encryption

Store backups in North America, European Union and Asia/Pacific regions. All backups encrypted using AES-256 encryption. Unlimited retention of daily backups. Archives can be downloaded in their original format for local use or offline storage.
